GEIGER Coffee

GEIGER Coffee is designed for coffee grind aroma analysis in the smallest, most portable package. It is a keyfob-sized sensor which provides direct insight to the freshness of ground coffee, using an easy-to-read LED scale, from green (fresh) to red (stale).

SPECIFICATIONS & FEATURES

Sensitive to Coffee Grind Aroma and many coffee constituents.
Presents results on the new Coffee Jo™ scale: from 1 to 10.
Super easy to use – turn it on and place it on the grounds, read the result shortly thereafter
Provides insight to freshness by characterizing the emissions of aging coffee grinds
Size is 1.2 x 2.0 x 0.3" (3 x 5 x 0.75 cm)
Hangs anywhere using keychain attachment
Rechargeable battery, provides about 90 minutes of power
One year warranty
Final Assembly and Test in USA

OPERATION

GEIGER Coffee is placed on top of a scoop of ground coffee. Within a minute, this novel device determines the freshness of the grinds and presents the result. It does this by smelling and judging the aromatic mix of compounds emitted by the coffee, which reduce over time.

To help understand freshness of coffee, we created the 'Coffee Jo'™ rating. It provides an easy- to-understand scale of 1 to 10+ for your coffee grind freshness. If you score 8 or higher, your coffee is fresh. 4 through 7, beware. 1 through 3, consider discarding and grinding anew.
